Great repository names are short and memorable. Need inspiration? How about [studious-spork?](#)

Description (optional)

☒ Public
Anyone on the internet can see this repository. You choose who can commit.

☐ Private
You choose who can see and commit to this repository.

Initialize this repository with:
Skip this step if you're importing an existing repository.

☐ Add a README file
This is where you can write a long description for your project. [Learn more.](#)

☐ Add .gitignore
Choose which files not to track from a list of templates. [Learn more.](#)

☐ Choose a license
A license tells others what they can and can't do with your code. [Learn more.](#)

 You are creating a public repository in your personal account.

Quick setup — if you've done this kind of thing before

Set up in Desktop or HTTPS SSH <https://github.com/patriciaprofe/sitioprueba.git>

Get started by [creating a new file](#) or [uploading an existing file](#). We recommend every repository include a [README](#), [LICENSE](#), and [.gitignore](#).

...or create a new repository on the command line

```
echo "# sitioprueba" >> README.md
git init
git add README.md
git commit -m "first commit"
git branch -M main
git remote add origin https://github.com/patriciaprofe/sitioprueba.git
git push -u origin main
```

...or push an existing repository from the command line

```
git remote add origin https://github.com/patriciaprofe/sitioprueba.git
git branch -M main
git push -u origin main
```

...or import code from another repository

You can initialize this repository with code from a Subversion, Mercurial, or TFS project.

☒ Enforce HTTPS

— Required for your site because you are using the default domain (`patriciaprofe.github.io`)

HTTPS provides a layer of encryption that prevents others from snooping on or tampering with traffic to your site. When HTTPS is enforced, your site will only be served over HTTPS. [Learn more.](#)

Dirección de la publicación.
